

When filming for an event, some accidents may occur such as audience members bumping into the platform and disturbing the filming process. The Global Truss Camera Riser provides a solution that ensures the stability of the tripod and the footage.

Designed to elevate camera angles to avoid crowd congestion and blocked views, the Camera Riser has a gap between the two-tier risers. Moreover, the legs are fully customisable with its adjustable height.

Storage clips are installed underneath the upper platform to hold the legs once both platforms are taken apart. Detachable wheels with connectors have semi-circle locking pins to secure the platforms to the wheels for transport purposes.

## FEATURES

- Elevated camera angles to avoid crowd congestion and blocked views
- Two-tier deck to prevent disturbance to footage
- Offers efficient assembly and disassembly of the platforms
- Easy movement for transportation due to wheels
- Compact friendly for easy storage
